IN PARTNERSHIP WITH

Hello, we're Maycast-Nokes.

When you think of a foundry you (probably) think of bubbling cauldrons of glowing metal and sparks but at Maycast-Nokes things are bit more advanced than that... In fact, every time you get on a commercial airliner there's a good chance that our work is all around you, playing a vital role in getting you to your destination safe and sound.

We're experts in turning molten metal into precision components capable of operating under extreme forces. Our castings can be found in machinery as diverse as satellites, jet aircraft and some of the world's fastest supercars.

Why not think about working with us? An apprenticeship with Maycast-Nokes is the starting point to a rewarding career in precision engineering and you'll be part of a team working on engineering projects at the cutting edge of technology.

100% of our apprentices have gone on to full time employment with us and some have continued their studies, achieving HNC's and degrees as well as senior engineering positions within the company.

A Maycast-Nokes Apprenticeship

We're looking for enthusiastic team players who like engineering and problem solving and are willing to take on a wide variety of technical challenges.

As a Maycast-Nokes apprentice you will spend time in all our departments, learning about foundry work, CNC machining, metallurgy, pattern making, non-destructive testing and quality. Alongside your work commitments you will undertake studies with one of our training partners. You will be expected to reach set targets and we will work with you to develop a range of skills.

You will need a good understanding of mathematics and engineering principles.

Typically, students can choose an apprenticeship that focuses on a specific 'craft' such as machining, pattern-making and foundry work or a course that includes training in all our departments, providing a more holistic approach to engineering and product development.

Our training is individually tailored and we will work with you to create a syllabus that best matches your skills and ambitions.

Award Winning Training

Maycast-Nokes Precision Engineering Ltd is recognised by the UK Government as one of the best employers in the UK for Apprenticeships and skills development. In 2016 and 2017 we won a place in the Top100 Apprentice Employers Awards and we aim to go even higher in the future. Come and be part of the team that makes that happen!

If university isn't for you but you want to continue your studies (whilst earning a wage) then come and talk to us. We can show you how your studies can be translated into real life engineering and a rewarding career in one of the most dynamic forms of manufacturing.

Want to know more? Great!

Here's how to apply

We advertise vacancies throughout the summer months with training commencing in September. If you are reading this in the depths of winter don't despair; we're always happy to hear from students who want to know more about our Apprenticeship scheme. Make sure you have done your research on us before you call – preparation is key!
